

FOR IMMEDIATE RELEASE

InfoComm 2016, Las Vegas – Jun 4-10 – Booth N2613

WyreStorm Targets the Hospitality Market with Game-Changing New Touch™ Control App for NetworkHD Products.

New York – Apr. 25, 2016 – WyreStorm NetworkHD Touch is [launching](#) a revolutionary free app for iPad that enables live video preview and control of an entire NetworkHD 100 and 200-Series AV [over](#) IP systems for both single screen and video wall applications.

As the name suggests, Touch literally places control of AV systems at users' fingertips with drag-and-drop selection of content onto each display for effortless switching of any number of sources to any number of displays or video walls with real time I/O video previews on the iPad screen. The responsive drag-and-drop operation [is highly intuitive](#) with selections appearing instantly on [both](#) iPad preview [screen](#) and [the](#) physical displays, making content switching an even easier and more enjoyable experience for the end user.

As easy to set-up as it is to use, Touch is configured automatically via downloads from the central NetworkHD system controller, [to](#) ensure users have access to their source content in a matter of minutes.

A live preview of all selected content is displayed in main video placeholders on the iPad screen, as well as live video thumbnail previews of connected sources along the bottom of the screen for easy access all on one interface.

Displays can be grouped into rooms, areas or video walls, with users able to save favorite preset configurations and even switch all displays to a single source [instantly for incredible flexibility over how content is selected and to where a user wants it to go.](#)

For video wall applications, Touch makes it possible to access settings and change preset display configurations within the NetworkHD 200 Series system and then drag and drop new content onto the iPad virtual display placeholders in real-time with changes to the actual video wall happening instantaneously.

Wall layouts can be changed, saved and recalled with live video previews of all sources and selected content displayed on-screen instantly and at the same time using WyreStorm's QuickSync™ technology.

Best of all, Touch can also be integrated with the WyreStorm Enado control system to enable control of the source devices themselves and take advantage of powerful Enado features, such as BYOD for the quick and easy addition of control devices by just scanning the Enado QR code straight into the app [for Enado control to be instantly available](#) within the Touch app.

Whether single screen or [video walls](#), switching is instantaneous with NetworkHD [Touch](#). The images never freeze or go black during the transition, no matter what content or devices are being switched – [content is](#) crystal clear and up on screen with a flick of the finger.

NetworkHD Touch is available free from the App Store (Q3 2016)
